

NC2 and NC3: update diagnostics

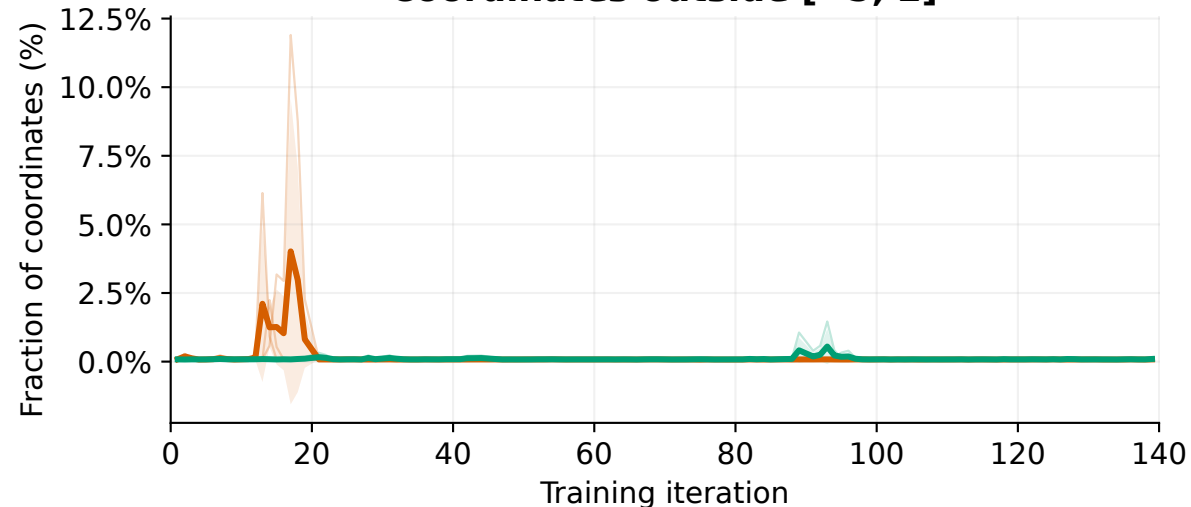

Post-update KL estimate

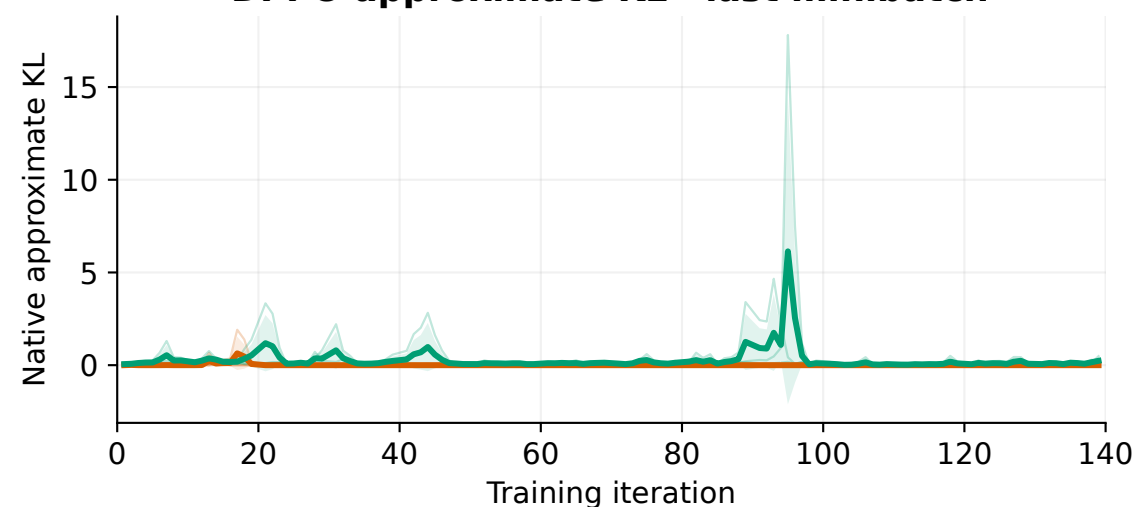

Post-update log-ratio tail

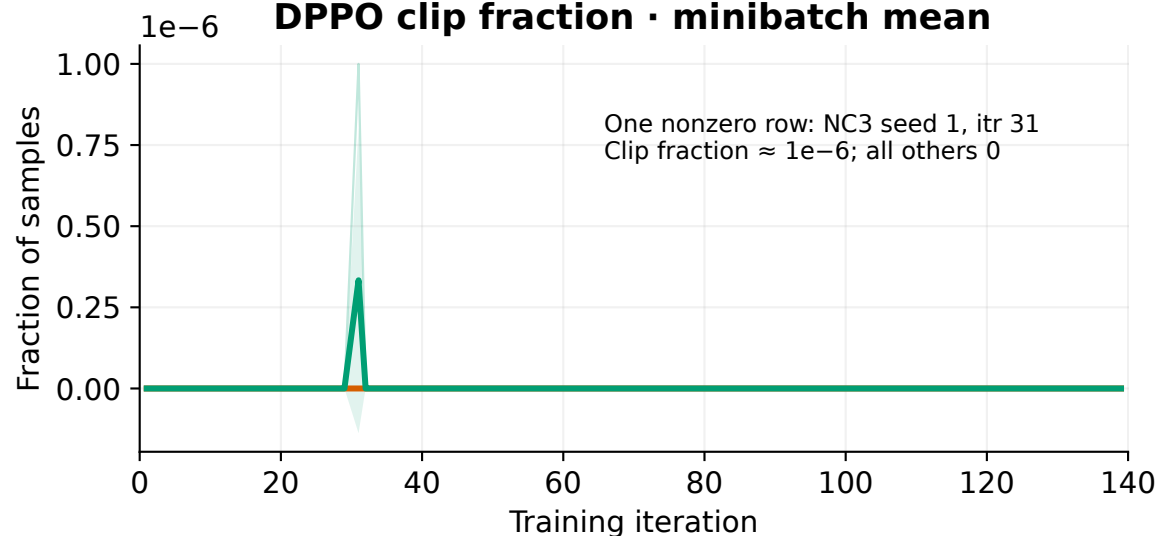

Coordinates outside $[-5, 2]$

DPPO approximate KL · last minibatch

DPPO clip fraction · minibatch mean

NC2 · coordinate mean
NC3 · coordinate sum

Three seeds · bold mean $\pm$ population SD
Faint lines show each seed; no smoothing.

Raw summed log-probs define post-update d for both conditions; native KL uses mean/sum.
Outside-range fractions are hypothetical: log-prob clamping is disabled in both.

Log panel omits 52 exact-zero observations; 135 nonpositive lower SD bounds are not drawn.
No zeros are replaced with an epsilon.

Stage 1 did not record these diagnostics;
R0 will be included in the full Stage 2 analysis.
