

NC4 diagnostics: changes after one actor step

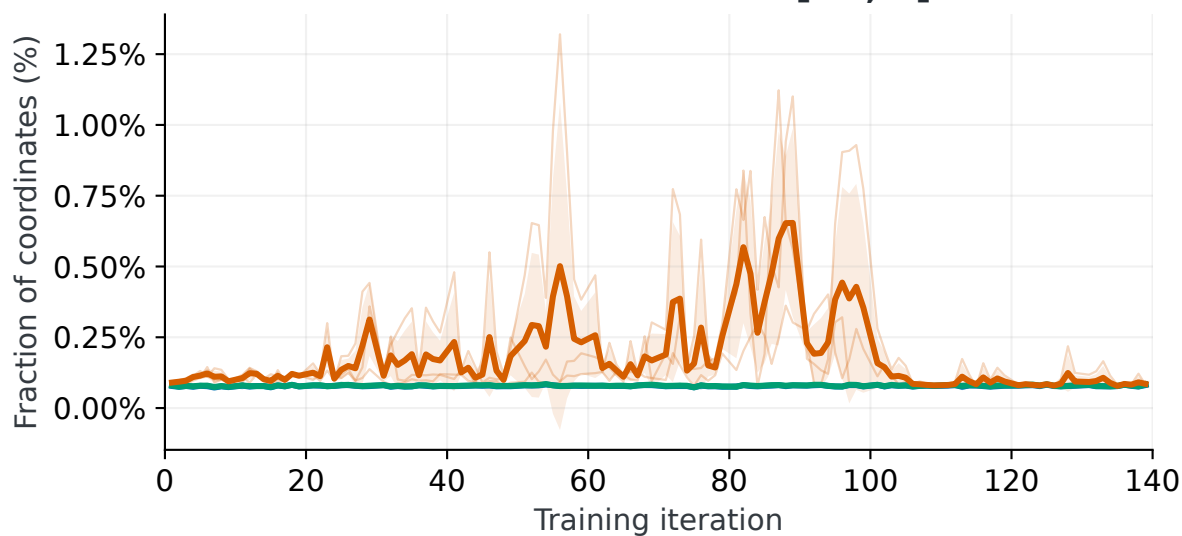

Post-update KL estimate

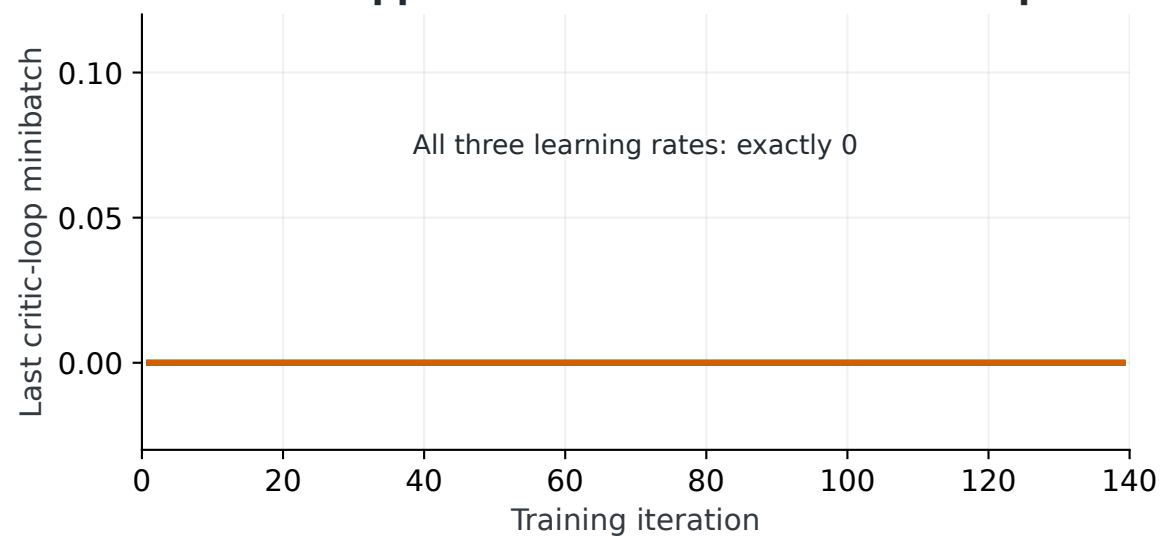

Post-update log-ratio tail

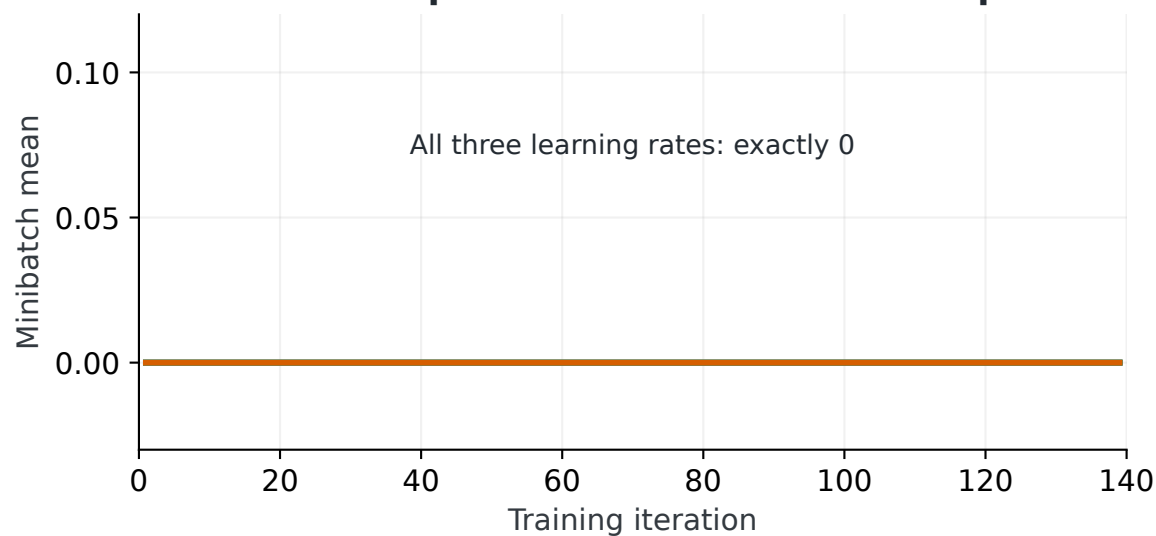

Coordinates outside $[-5, 2]$

DPPO approximate KL · before actor step

DPPO clip fraction · before actor step

- NC4 · LR $1e-4$
- NC4 · LR $1e-3$
- NC4 · LR $3e-3$

Three seeds · bold mean $\pm$ population SD
Faint lines show each seed; no smoothing.

Actor pre-step ratio = 1 in every update.
Zero pre-step KL does not constrain post-step KL.

Log panel omits 4 exact-zero observations;
26 nonpositive lower SD bounds are not drawn.
No zeros are replaced with an epsilon.

Stage 1 did not record these diagnostics;
R0 is still running and is not included.
